

Biography

Mats Valli is the founder and managing director of Valli Consulting AB, a company specialising in providing advice and training on project management, quality systems and efficiency improvement.

Mats holds a Ph.D. in Chemistry and has lived and worked in Japan as a research associate and university lecturer in analytical chemistry for several years. Apart from an interest in the Japanese language, Mats' interest in the culture has encouraged him to learn and actively adopt and implement "Kaizen" (a philosophy in continuous improvement) to both his personal and professional life.

Prior to establishing Valli Consulting AB, Mats was working with Pfizer Health AB in Stockholm-Uppsala. During his more than a decade long tenure with Pfizer, Mats has held various in-house training, research and managerial positions within the company. Leveraging on his experience, Mats has played an integral part in managing and implementing various large scale projects.

Mats has on several occasions been invited to lecture on analytical techniques and quality issues pertaining to the pharmaceutical industry.

Lectures

We offer training in the following areas:

Project Management, Lean Manufacturing etc.

- Project management
- Introduction to Six Sigma
- Lean Laboratories
- Kaizen
- Introducing Key Performance Indices

Statistics and Chemistry

- Statistics for the laboratory
- Multivariate data analysis

Quality

- cGMP in the QC laboratory
- 21 CFR Part 11 for electronic systems
- Surviving a Quality Inspection

Customer specific training can be offered upon request.

Valli Consulting AB is an Uppsala based company that was founded in 2007. The company's founder has over a decade of experience within the pharmaceutical industry with special focus on project management, efficiency improvement, and quality systems.

Valli Consulting AB's assignments are primarily focused on pharmaceutical, bio-tech and chemical industries, both locally and internationally. Apart from consulting, we also provide training in areas pertaining to our core competency.

The company's mission is to leverage on its experience and expertise in providing top notch advice and training to companies for project management, work under quality systems, and productivity improvement.

We have an extended history of managing large projects such as relocation and reconstruction of laboratories, restructuring of documentation systems, introduction of IT-systems, efficiency improvement and work under cGMP (current Good Manufacturing Practice) in accordance with regulations set forth by authorities such as the American FDA (Food and Drug Administration) and European medical product agencies.

Valli Consulting AB provides tailor-made solutions for every single project with utmost professionalism and precision. Our consultants will personally supervise and advice on clients' needs and in turn ensure the most appropriate course of implementation and execution.

Please, visit our website at www.valli.se or contact us for professional advice on how we can make a difference to your impending needs for improvement and enhancement in quality and productivity management.

cGMP Support

Valli Consulting AB has over 10 years of experience working under current Good Manufacturing Practice (cGMP) regulations, ISO regulations and ICH guidelines, with over six years as responsible for the quality systems within the QC laboratories of Pfizer Health AB in Uppsala, Sweden.

We have participated in, and hosted, several quality inspections by regulatory authorities and other enforcing bodies, including the Swedish Medical Products Agency and the US Food and Drug Administration (FDA). We have also participated in inspections of incoming material suppliers. On several occasions, we have lectured on cGMP issues, including 21 CFR Part 11 for electronic records.

Valli Consulting AB can assist and advice on setting up and maintaining quality systems, including topics such as documentation practices, change control and deviation management.

We provide a one-stop venue for our value adding services, from preparing for inspections by regulatory authorities, assist and advice during regulatory authority inspections, perform pre-inspections, provide training on cGMP and other quality regulations, to the ultimate design and improvement on customer's quality systems.

Lean Production

Valli Consulting AB can assist in building lean processes, including lean laboratories. We work with concepts such as Value Stream Mapping, Kaizen, Five S, JIT (Just-In-Time) and Lean Production.

We are capable of improving the efficiency in laboratories and other business areas, introducing an environment of continuous improvements. Valli Consulting AB consultants are also trained in Six Sigma.

Project Management

Valli Consulting AB has the relevant experience in leading and participating in many large scale projects. Projects we have worked on include:

- Implementing a Laboratory Information Management System (LIMS) within QC laboratories and QA departments
- Restructuring of all analytical methods and quality specifications
- Transfer of analytical methods between laboratories within Europe and between Europe and the USA
- Transfer of knowledge between laboratories
- Planning new laboratories, including logistics
- Relocation of laboratories to new facilities
- Closing down laboratories and production facilities
- Improving laboratory efficiency with planning systems
- Introducing computerized systems

Our consultants whom have many years of working experience as line managers are trained in project management, including areas such as Six Sigma, Kaizen and Lean manufacturing
